

# Interview Problems

## TABLE OF CONTENTS

1. Max consecutive is :
  - a. Atmost 1's replace
  - b. Atmost 1's swap
2. Majority Element
3. Row to Column Zero

## Benefits of Constraints:

- 1) Data structure.
- 2) Time complexity.
- 3) Algorithm.

$$N \leq 10^6 \quad O(N), O(N \log N)$$

$$N \leq 10^3 \quad O(N^2)$$

**< Question > :** Given a binary array  $[]$ . We can almost replace a single 0 with 1. Find the maximum consecutive 1's we can get in the array  $[]$  after the replacement.

$$A = [1, 1, \cancel{0}, 1, 1, \cancel{0}, 1]$$

                                                
                    1                      1  
                    5                      4

 $1 \leq N \leq 10^3$ 

Ans = 5

$$A = [0] \quad \text{Ans} = 1$$

Quiz 1:

$$[1, 1, 0, 1, 1, \overset{\uparrow}{0}, 1, 1, 1]$$

                                                
                    ↓                      ↑  
                    5                      6

Ans = 6

Quiz 2:  $[ \cancel{0}, 1, 1, 1, \cancel{0}, 1, 1, \cancel{0}, 1, 1, \cancel{0} ]$

Ans = 6

$[1, 1, 1, 1, 1] \rightarrow 5$

ans = ~~0~~ 6

$[0, 1, 1, 1, 0, 1, 1, 0, 1, 1, 0]$

$l = 0$   
 $r = 3$   
 $l + r + 1 \Rightarrow 4$

$l = 3$   
 $r = 2$   
 $l + r + 1 \Rightarrow 6$

$l = 2$   
 $r = 2$   
 $l + r + 1 \Rightarrow 5$

$l = 2$   
 $r = 0$   
 $l + r + 1 \Rightarrow 3$

Sol:

For every zero check max consecutive  
1's, we can have by updating this 0 with  
1.

Count of 1's on left  
and right side.

```
Ans = 0; totalOnes = 0
for (i = 0; i < n; i++)
{
    if (A[i] == 1)
    {
        totalOnes++;
    }
}

if (totalOne == n)
{
    return n;
}
```

$O(n)$

```
for (i = 0; i < n; i++)
{
    if (A[i] == 0)
    {
        l = 0;
        for (j = i - 1; j >= 0; j--)
        {
            if (A[j] == 1)
            {
                l++;
            }
            else
            {
                break;
            }
        }
    }
}
```

&lt;/&gt; Code

```
    }
    }
    break;
}

x = 0;
for (j = i + 1; j < n; j++)
{
    if (A[j] == 1)
    {
        x++;
    }
    else
    {
        break;
    }
}

if ((l + x + 1) > ans)
{
    ans = l + x + 1;
}
}
}

return ans;
```

$[1, 1, 0, 1, 1, 0, 1, 1, 1]$

$$TC = 3n + n = O(n)$$

$$SC = O(1)$$

$[1, 1, 1, 1, 0, 1, 1, 1, 1]$

$[0, 1, 0, 1, 0, 1, 0]$

$[1, 0, 1] \rightarrow 3$

$$l = 1$$

$$r = 1$$

$$l + r + 1 \Rightarrow 3$$

< Question > : Given a binary array []. We can swap a single 0 with 1. Find the maximum consecutive 1's we can get in the array[] after almost 1 swap.

6  
[0, 1, 1, 1, 0, 1, 1, 0, 1, 1, 0]  
Ans = 6

0 1 2 3 4 5  
A[] = {1, 1, 0, 1, 1, 1}      Ans = 5

```
Ans = 0; totalOnes = 0
for (i = 0; i < n; i++)

Tc:  $O(n)$

Sc:  $O(1)$

## Majority Element

< Question > : Given array [ N ]. Find the majority element

Elements which occurs more than  $N/2$  times.

$$\text{freq.} > \frac{N}{2}$$

$$A = [ \overset{0}{2}, \overset{1}{1}, \overset{2}{4} ] \rightarrow \text{No majority}$$

$$A = [ 2, 2, 4 ] \rightarrow > \frac{N}{2}$$

$$\text{freq}(2) > \frac{3}{2}$$

$$\text{Ans} = 2$$

$$2 > 1$$

$A[] = [3, 4, 3, 6, 1, 3, 2, 5, 3, 3, 3]$

$$N = 11 \quad \frac{N}{2} = \frac{11}{2} = 5$$

Ans = 3 ←  $\text{freq}(3) > 5$   
 $6 > 5$

$A[] = [4, 6, 5, 3, 4, 5, 6, 4, 4, 4]$

$$N = 10 \quad \frac{N}{2} = 5$$

$\text{freq}(4) > 5$   
 $5 \not> 5$

NO majority element.

There will be only one majority ele.

Brute force:

Iterate and find freq. of each element

$$T_c = O(n^2)$$

|| slightly better: Sorting  $O(n \log n)$

|| Hashmap  $T_c: O(n)$   $Sc = O(n)$

Break : 10:35 PM

## Moore's voting Algo:

If we remove any two distinct ele, the majority element still stay the same.
